Year round; Monticello dam to Lake Solano
Barbless, artificial lures/flies only
Catch and release ONLY

ACCESS & PARKING ARE AVAILABLE
ALL ALONG HIGHWAY 128.

P = OFF STREET PARKING
P # = OFF-STREET PARKING W/ $4 FEE

Fishing Alert

The New Zealand Mud Snail, a tiny snail, was newly discovered in Putah Creek. It was probably transported to Putah Creek on fishing or boating equipment used in other waters. It is unknown if this snail population would harm native invertebrate species. Throwing mud snails in other areas is expected to eventually have a detrimental impact on local populations.

Please help protect California's native fish populations by preventing the spread of this harmful snail to other waterways.

1. Wash your boots off completely before leaving the creek.
2. Inspect your boots, nets, and other equipment for snails.
3. Check the bottom and the tongue folds of your boots.
4. Soak your boots and nets in hot tap water (110°F) for 20 minutes.
5. Allow your boots to dry completely.
6. Check boots, kayaks, and canoes for snails.

EVEN BETTER
Use one pair of boots just for Putah Creek and clean as above.
